

NUTRIENT SCHEDULE

Before you start make a warm bed by using Biobizz® substrates

Start using fertilizers when your baby plant is 10-15 cm or has 2-4 leaves

Water 2-3 times a week, no need to water till run-off

You can mix several fertilizers in the same feeding water

A pH-value between 6.2 and 6.5 is ideal
Controlled pH-value between 6.2 and 6.3

It is always better to be modest than to add more.
A plant will not die from too little nutrients, but it won't survive an overdose

* It is beneficial to replace **Bio-Grow®**, with **Fish-Mix™** in the vegetative phase but switch to **Bio-Grow®** when you want to trigger flowering.

** For every system: soil, hydro & aeroponics.

*** **Alg-A-Mic™** and **Fish-Mix™** can also be applied as a foliar, 1-3 times a week until the second week of flowering.

Dose: When using 1 or 2 of the products: 1-2 ml/L water of each. When using all 3 products: max. 1 ml/L water of each.
